Transcript* - Guest Speaker Russ Miller – 9/20/2026

Good morning. Hey, my name is Russ Miller, and I've been here a few times in the past. I've always enjoyed being here with you guys, so I'm looking forward to this morning. I want to start out by, just mentioning something that we have coming up with Broadway Christian Church. I would Grand Canyon Tours based on biblical creation for about 24 years now.

I used to lead a river raft trips through the canyon based on biblical creation. I think I've rafted the entire length of the Grand Canyon 13 times, some sections over 100 times. But I now basically do, grand staircase and rim tours to the canyon because, the, secular narrative. And remember, we own the truth. But the secular world, Satan is the God of this fallen world, owns the system.

We own the truth. But they own the system. The historical narrative taught about Grand Canyon today is that the Colorado River formed it over. Never seen millions of years of time. You know, they used to teach the ancient river theory for 100 years. And finally, 1960, it got totally debunked and they finally stopped teaching it by 1990. Then they came up with the stream capture theory, and they taught that for 30 years.

That's been debunked. Now, right now, they don't even have a viable theory. I've got three different theories that all fit a six day formation. And I'll be talking about that. On October 10th. I'll explain that in just a moment. But how many you've been to Grand Canyon? Big hole in the ground, isn't it? You know, it's a mile from the rim down to the river.

Some of the things that they won't teach you is that mile of strata, the ten primary layers laid down by water, by the way that it cuts through. There used to be two miles of layers above the rim before the canyon existed. They got removed from southern Utah south by late floodwaters that left behind the grand staircase cut the 2500ft pink cliffs at Bryce, remove those layers south to the sea, dropped 45 miles, cut the 20 500ft cliffs at Zion.

Remove those layers south to the sea. Dropped another 45 miles. Cut the 20ft tall Vermilion Cliffs where we launched the river raft trips from, and then dropped another 90 miles and cut the Mogollon, ruined the 2000ft rim that goes east and west across northern Arizona, removing those layers south to the sea. In all, 150 times more sediments are removed from the staircase.

Then what's been removed from that puny little Grand Canyon? Grand Canyon is nothing compared to the staircase. But how many of us have been to Zion? Or how about Bryce? You went through the staircase, but when you went there, they didn't say a word about how they formed, did they? But they they don't want to talk about that because there's only one way to answer.

And that's global flood, which wipes out every old Earth belief, which is the foundation of secular atheism. They own the system, but we own the truth. So Grand Canyon, the two miles of layers were removed and the whole area uplifted form in the Kaibab up or up. This is a satellite photo, the white as snow. It's on the uplifted part and that's the canyon.

Grand Canyon doesn't cut a mile deep into the plain. It cuts through the upper and water doesn't run uphill, does it? So they've got some big problems there. But waters later cut through that up work in a matter of days forming Grand Canyon. That's why we don't have Grand Canyons all over the world. I mean, if rivers carve out big canyons over millions of years and the earth is billions of years old, why is never a river, gully, stream and creek?

And so home Grand Canyon took special circumstances to form the canyon. And October 10th, there's some proof of the missing two miles of layers right there on the rim of the canyon. I'll show you this. And we're going to we're going to take a bus tour from the parking lot here with, I believe, 52 folks who ever want to go.

And we will show you all these things at Grand Canyon, and it'll just be a great day. I've got a short video I want to play about that day. And Broadway Christian Church is rolling out a dome. Pastor John on the bus as we all sing along. Heading for Grand Canyon where God's truths run deep.

A faith in tour with memories you can stand in all the real big sky. Over here the rock walls cry out the truth. The Bible said. Join our October chant to a faith building. Right? See creation, rock and flood. Live side by side. Come learn, laugh and see what God has done. Standing on the rim. Big sky overhead.

The rock walls cry out. Just as Jesus said. To.

Get on the bus for faith building right where flood layers me. Creation. Rock side by side. Come praise, smile and see the side of today.

And on October 10th.

We'll be on our way. Now, believe it or not. My cell phone. A friend of mine called. I wrote that song. Now, my uncle was a famous singer. Many you've probably heard of Roger Miller. And, I think he won 12 or 13 Grammys. A Tony for a Broadway musical. He wrote on Huckleberry Finn. And, he's this country singer of the year, one year, the pop singer of the year, one year.

But that talent skips a generation. But I mention that because on the tour, we might just happen to play a couple of his songs as we roll along. It's going to be a fun day, so I hope you'll consider joining it. I will also show you here the creation rock is in the canyon and we're the first. The flood layers lay right on top of it and where you could actually go and put your thumb on creation Rock and your fingers on the first the judgment layers you could actually physically touch for creation and judgment meet at Grand Canyon.

And just some of the things we'll share on October 10th, so I hope you'll consider going with us, the Bible says were asked rhetorically at the foundations be destroyed. What can the righteous do? Well, my answer is we can rebuild the foundations because keep in mind we own the truth, but they own the system. You know the story.

The Grand Canyon formed over millions of years. Did anyone see that happen? Well, how do they know what happened? That's what's called a historical narrative. Half what? The sink in half of everything we've ever been taught is science are actually narratives. Well, secular atheists own the system, so the narratives are made up by secular atheists. And seeing Grand Canyon formed over millions of years is just planted the foundation of secular atheism into your bro.

Your minds millions of years is their foundation. Jesus say you tell good from bad by the fruit. The first fruit come off millions of years. Belief is Darwinian evolution. Those two beliefs are both historical narratives, not science. Did you know that of the 200 or so branches of modern science, over 80% were started by Christians? Did you know that the father of the scientific method, Sir Francis Bacon, the greatest scientist of all time, Isaac Newton, who wrote over 100,000 pages about the Bible?

Over 80% of the branches of science were started by Christians. Real science is our best friend, always has been, always will be. But half of everything you've ever been told is science. Our historical narratives and secular atheists own the system. The narrative is going to fit their belief system, just like Grand Canyon formed over millions of years of never seen time.

Operational science. Your best friend is knowledge derived from the study of evidence. You can test and study something over and over and over and over again, and know the results become always are the same. It becomes a scientific fact. That's operational science. Your best friend. Historical science is where there's controversy between the Bible and what masquerades as science.

Jesus said, I am the light of the world. Paul said, while we were yet sinners, Christ died for us, our creator, our God, the light of the world willingly sacrificed himself. So you and I could be redeemed within. Our sin had corrupted creation, has separated us from him, and you have to be perfect to be redeemed. And we can't be perfect.

We're sinners. We have a sin nature. So Jesus died on a cross so we could put on his righteousness and be redeemed with him. It's important to believe in Jesus. It's important to believe God's word. So I thought this morning we would look at a message that I call microscopic man and astronomical God. I want to encourage you that you can put your trust in the Word of God, word for word and cover to cover.

And I'm going to do that this morning by showing you some of God's fingerprints that are found throughout his creation. And a mistake that we all tend to make is we want to limit God to what his creation can do, what nature can do. That is a huge mistake. God is way beyond his creation. He just made his creation.

It is spoken word, but don't limit God to what his creation can do. He is way beyond creation. He's too big to be contained by nature or the universe he created. Now, to fully understand some of the things I want to show you this morning, we have to be able to comprehend humongous numbers. Now we throw out millions and billions and trillions all the time, but we don't really comprehend those numbers.

It's just something we throw out. I think we can get a feel for a million, but not 1 billion or 1 trillion or beyond. So let me use seconds like in 60s in a minute. Let me use seconds to get you to start to think about how huge these numbers are. 1,000,000 seconds ago was 11 days ago. What's the difference between 1 million and 1 billion?

Well, 1,000,000,000 seconds ago was back in 1994. That's the difference between 1 million and 1 billion and 1,000,000,000,000 seconds would have been 32,000 years ago. These are humongous numbers. And we're. How many trillions in debt? Oh, wait, I'm sorry. This we don't want to talk about that right now. But the Bible tells us that God created man in his own image, male and female.

The Bible talks about mankind and the Bible is talking about men and women, male and female. You know, you were made of an estimated 75 trillion cells. Wow. If each of your cells represented by one second, it would cover over 2.5 million years of time. In fact, each of your cells DNA contained 3 billion base pairs of genetic information.

Purcell times trillions of cells. We're talking over 260 billion base pairs of genetic information to make up a human when the world sextillion. Well, you've got a million, billion, trillion, quadrillion, quintillion and then sextillion and IBM try to think about how much time that would be represented by seconds. So you the complexity of a human being is literally beyond comprehension.

I thought, let's take a look at one of the fingerprints of God upon his creation. I want to show just a short video on the information processing system inside of a cell. You've got these 3 billion pairs of

genetic information in this cell. But how in the world does that translate into proteins, and how does it get to body parts to keep us alive and functioning?

Interesting, because keep this in mind. Back in Darwin's day, they thought a cell was just a simple gelatin like substance, not complex, just something like gelatin. So they they could imagine how maybe that came together on its own. Okay, let's look at this video and ask yourself, is this could come about on its own? Science has revealed the details of an entire system of information processing that bears the hallmarks of intelligent design.

With computer animation, we can enter the cell to view this remarkable system at work. So this is going to go into the cell nucleus. There's the DNA strand. After entering the heart of the cell, we see the tightly wound strands of DNA storehouses for the instructions necessary to build every protein in an organism. So.

In a process known as transcription, a molecular machine first unwinds a section of the DNA helix to expose the genetic instructions needed to assemble a specific protein molecule. Look at these genetic motors. Molecular machine then copies these instructions to form a molecule known as messenger RNA.

When transcription is complete, the slender RNA strand carries the genetic information through the nuclear pore complex. The gatekeeper for traffic in and out of the cell nucleus.

The messenger RNA strand is directed to a two part molecular factory called a ribosome. After attaching itself securely, the process of translation begins.

By matching genetic information there, putting these amino acids together alongside the ribosome, a molecular assembly line builds a specifically sequenced chain of amino acids. These amino acids are transported from other parts of the cell and then linked into chains, often hundreds of units long. Their sequential arrangement determines the type of protein manufactured. This is odd shape. Three dimensions.

They have to fold together perfectly to form specific proteins. When the chain is finished, it is moved from the ribosome to a barrel shaped machine that helps folded into the precise shape critical to its function.

There's the folding.

Really think that came about by accident?

After the chain is folded into a protein, it is then released and shepherded by another molecular machine to the exact location where it is needed. Wow, those are Hox genes. Take it exactly where it needs to be. Any mutation anywhere in that process would destroy the entire process. I will praise thee, for I am fearfully and wonderfully made.

Praise God! And the cell is not just a simple gelatin like clump of substances. It's not at all. No. When the this researcher stated when the RNA DNA system became understood, the debate between creation and evolution should have come to a screeching halt. Well, you know, I cover Darwinism in my top ten Darwinian teachings. I gave this a quiet auditorium, and in a few, a few years ago, after one of the biology teacher came to that event, ended up quitting her job, saying, I'll never teach the fairy tale of Darwinian evolution again.

She had to quit her job. She ended up, getting a job as a science teacher in a Christian school and in AEW. They made it an accredited course, attacking me in biblical creation, which they ran for at least four years for their final exam. They just made fun of me for an hour and a half. Is that how immature?

They don't have to make fun of people. They have to call names. I mean, name calling is the last bastion for those with no evidence to put forth. All they had to do is show a couple examples of Darwinian evolution having taken place. They can't do it. It never happened. And these are some of the frauds you see in textbooks.

Some of you were taught these when you're in school. There's an old saying that goes like this. Darwinists are experts at drawing things that never existed to support their theory, that never took place. You take away their box of crayons and they've got nothing. I mean nothing, and I cover that in a top ten Darwinian frauds. And also my book, Consider the Cost.

It's one of the parts of that book. You know, the first verse in the Bible states that in the beginning, God created the heaven and the earth in the middle of the Ten Commandments, etched in the stone by God's very own finger. He claims, for in six days the Lord made the heaven, the earth, the seas, and all that is in them in six days.

That's the Word of God, my friends. And you can believe the Word of God, word for word and cover to cover. The first celestial orb made in the sixth day. Creation was our planet, the Earth. And in Isaiah we're told God formed the earth to be inhabited. I want to give you a couple more fingerprints of God upon his creation.

Look at Earth's gravity. It's absolutely perfect to allow us to live here on our planet. Right now, the Earth is spinning at 1000mph at the equator. As we sit and stand here today comfortably with the air

conditioner blowing, our planet is hurtling through our solar system, orbiting the sun at over 66,000mph. Right now, we're traveling that fast. That's about 20 times faster than a speeding bullet.

And yet here we sit, perfectly safe and comfortable. The perfect gravity to allow life to exist on our planet. And God said on the first day that let there be light, and there was light, and God divided the light from the darkness. On day one, some people scoffing at God's Word, say, God couldn't get light here in a six day creation.

Well, not at today's speed, but don't. And don't what God in what nature does. He actually got it here on the first day of creation, and on the fourth day he tells us that he made the sources of light that we enjoy today. He he made two great lights the greater light to rule the day, the sun and the lesser light to rule the night, the moon.

Now he placed the sun 93 million miles away from us, at over 186,000 miles per second. It takes light about eight minutes to get here from the sun. The sun is so large that 960,000 Earths could fit into it. Wow, that's a big star, isn't it?

Now he also put Earth the perfect distance to allow life to exist. The temperature range throughout the universe varies by tens of millions of degrees Fahrenheit. Now that blue line, if that represents the temperatures in the universe, that black line in the middle represents the 180 degree range, where you can have liquid water out of tens of millions of degrees.

Water is only liquid in a 180 degree range. And for that blue line to be in scale with that black line, the blue line would have to have had South to Lima, Peru, and north to Anchorage, Alaska, to have that black line represent the 180 degrees. Wow. If we were 2% closer to the sun, all water would evaporate.

There'd be no life on Earth. If we were 2% further away, all our water would freeze and life would not be able to thrive on our planet. Jesus said, he who follows me will not walk in darkness, but will have the light of life. Paul said, For God delivered us from the domain of darkness and transferred us to the kingdom of his beloved son.

You know, in spite of ourselves, God loves us so much, he sent his only begotten son to suffer and die on a cross, his shed blood, his sinless shed blood covering our sin. And the only thing he asks us to do is believe in him. We are an enemy out there, and he's going to throw out all kinds of stumbling blocks to get you to doubt God's word.

Right? He's he's asked questions. Hath God said you not to eat of every tree of the garden? The first question in the Bible hath God said it was six days. Hath God said it was a global flood. On and on it goes. And I want to assure you that you can read God's Word always in the proper context, and believe God's Word word for word, and cover to cover.

Now so on the fourth day he made the sun and the moon. And if you read, you read this carefully. I mean, it strikes me almost funny. I mean, it almost sounds like God's like, well, I made the sun and the moon. I got a little extra time. I'll make the stars also. Now that word star could represent a planet.

A nebula of what we call stars. Today, all these different things in outer space are covered by that word star. Now, this is a comparison of the sun to the larger planets in our solar system. Now, the Earth is just to the upper right of the sun. And actually that dot representing the earth. The earth is only one tenth of that size.

But that was the smallest dot I could get through. You'd be able to see it. But this is what God does in his spare time. He he made the stars also on day four.

And in first Corinthians 15, we're told that each star is different from another star in glory. Every star is different, like fingerprints. Well, finally, science caught up with the Word of God in the last 25 to 30 years. And now they agree that every star is different. Every star is unique. They vary by size. They vary by color.

They vary by the amount of heat it puts forth and so far, just like fingerprints, every star is unique and every star is different. In the book of Amos, we were told to seek him. That made the seven stars. The Lord is his name. The seven stars are a cluster of seven stars hurtling through our Milky Way galaxy at about 90,000mph, called the Pleiades or the Seven Sisters.

In Isaiah, we're told the Lord thy maker has stretched forth the heavens. About ten times in Scripture we're told God stretched out the heavens. On day four. He made the heavens. He stretched them out like a curtain. Now, our present measuring device for the universe is a light year. So traveling at 186,282 miles per second, it takes light about a year to travel almost 6 trillion miles.

So a light year is roughly 6 trillion miles. Really more of a measurement of distance than it is of, time. But I want to show you some images of various stars. I want to show you how spectacular God's creation is and throughout the universe, especially when it comes to what he did in his spare time on the fourth day of creation.

So I'm going to show you a depiction of the sun and a nearby star known as Pollux. So the sun is on the left. Now, as you look at that, remember, 960,000 Earths would fit into that sun. And Pollux is a huge star that's about 34 light years away. It is nine times the diameter of the sun. That's Pollux now, in Jobe, we're told that, God made Arcturus.

Well, let me compare Arcturus to the sun and Pollux. There's Arcturus compared to Pollux. Now, Arcturus is 37 light years away from us, praise God. And it's hurtling 400,000mph through the Milky Way galaxy. Goodness gracious. Now, I'm going to shrink Arcturus down, because I want to show you some serious stars. Okay? So I'm going to shrink Arcturus down.

There's Arcturus compared to Beetlejuice. Beetlejuice. This size is twice the diameter of the Earth's orbit around the sun. That's a big star. It's estimated 262 trillion Earths would fit into that star over 400 light years away from us. This is an image of a star named on terrorists. Now, it's 600 light years from us. So in the last depiction, we had Arcturus and Beetlejuice.

Well, here's on terrorism. It is 700 times the diameter of our sun. I'm gonna just show you a couple more stars because it can get tedious after a while. But I want to show you two of the really big stars God made on day four. So I'm have to shrink on cherries down. Okay, so here's on Terry's and here is my Saffy.

Now, Myselfi. Its diameter is equal to Jupiter's orbit around our sun. That's a big star. It's estimated 1.2 billion suns would fit into it, not 1.2 million. 1.2 billion suns would fit into Musashi. But the biggest star we know of is Canis Majoris. Now, praise God he put Canis Major is 5000 light years away from us. So again, here is Antares.

Compared to me, Saffy. And here is Mustafa. Compared to Canis Majoris, it would take light again. Traveling at over 186,000 miles per second. It would take light eight hours to go around that star. It's estimated that 7 quadrillion Earths would fit into Canis Major US. Oh, wait a minute. We haven't talked about quadrillion yet. So let's go back to comprehending huge numbers.

1,000,000 seconds ago is about 8 a.m. a week ago. Last Wednesday, 1,000,000,000 seconds ago, was back in August of 1994. 1,000,000,000,000 seconds would have been 32,000 years of time. 1,000,000,000,000,000 seconds would equal 32 million years of time and day estimates 7 quadrillion Earths would fit into Canis Majoris. You know, God's creation is really beyond human comprehension. And don't make the mistake of trying to limit God to what he created.

He is way beyond his creation. Multiple times throughout Scripture, we're told God stretched out the heavens. He stretched them out like a curtain. He made them to be seen. He stretched them out. He made the heavens mature. And this is what God stretched out. And the afternoon of the fourth day of

creation, after he had made the moon and the sun in second Peter were warned that in the last days they'll come scoffers.

Haven't you guys ever run into a scoffer? I run into him all the time, you know. Here's what you should do when you run into one and they start scoffing at you, just say, wow. Unbelievable. Praise God for you. And they'll. What are you talking about? Well, the Bible said, in the last days you'll come scoffers. You're fulfilling biblical prophecy right before my eyes.

Wow. God's word is true word for word and cover to cover. But these scoffers are going to be willingly ignorant of two things one, they're going to deny the global flood. In fact, the great part of my ministries, including our Grand Canyon tour, is showing you overwhelming proof of the flood, which wipes out every old Earth belief, by the way, and they're going to be willingly ignorant by the Word of God.

The heavens were of old. They're going to be willingly ignorant that God made the heavens mature. You ever heard somebody say, well, God couldn't get lighter in a six day creation? He travels 186,000 miles per second. I mean, this these stars, some of these stars are 100 light years away. God couldn't get light here when he wants to remember God is outside of time.

He stretched it out. You know, scientists, just people working in labs. Did you know scientists and labs have slowed light to 100mph? Did you know they've slowed it to 30 miles an hour? Did you know that scientists in labs have brought light to a dead stop and captured it and rereleased Joe? Other scientists working in conjunction with Princeton.

We're able to speed light impulses to 300 times the speed of light to over 55 million miles per second. So here's where I stand. I think of mankind, and our finite little brains can play around with the speed of light. I don't think the creator of the universe, the creator of life itself, the creator of genetic information and molecular motors, had his spoken word, has any trouble getting light anywhere he wants?

Exactly. When he says he's done it? Do you want to agree with that? Absolutely. Don't make the mistake of limiting God to what his creation can do. You know, some people are still trying to fit in the foundations of secular atheism. Millions of years of time will say, well, there was no sun till day four, so we don't really know how long the first three days were.

Have you ever heard that? Oh my friends, day. The time period of the day has nothing whatsoever to do with the sun. A day is one spin of the Earth upon its axis, so that shoots down that misinterpretation. Don't try to figure out how to fit secular atheist beliefs into God's Word. Just figure out why God's Word can stand on its own.

You'll be in very good shape. In fact, God told us in Genesis one verse 14 that he said, let there be light in the midst of the heaven for signs, for seasons, and for days and years. Notice it. God knows the difference between a day and a year.

And an ax or toll. Heaven is God's throne and earth is thy footstool. So this is God's throne. These are his footstools and this is what he created in the afternoon of day four. He made a very interesting observation or even statement, maybe even prophecy, when he was speaking to Abraham and making a covenant with Abraham in Genesis 22, he tells Abraham, I will multiply thy seed as the stars of heaven, and as the sand upon the seashore.

God compares the numbers of stars in heaven with the numbers of sand grains upon the seashores of the earth. Well, that you've been to the seashore, you pick up sand and thousands of little grains fall through your fingers. There are six millions of sand grains around the globe, and God, compared at that time, you can only see about 1500 stars with the naked eye.

But God tells Abraham that the numbers of stars in heaven are comparable to the grains of sand on the on the beaches of the world. Well, Nassau, they finally caught up with God about 25 years ago with the Hubble telescope. They left a powerful lens open to a little pinprick of space and left the lens open for 96 hours.

And after four days, they closed the lens. And here's the image they came up with. Now, those are not individual stars. Each one of those bright spots are individual spiral wound galaxies, each one made up of hundreds of billions of individual stars. Each. And those stars are spread out by hundreds, if not thousands of light years within each of the spiral wound galaxies.

What they what they proved was that the numbers of stars in heaven are comparable to the numbers of sand grains on the shores of the earth. As science finally caught up with the Word of God, they also came up with what's called the winding up dilemma. You see, all those tightly round spiral galaxies if the universe, even 50 million years old, less time, and they say dinosaurs have been extinct, all those stars, they should have spread out, lost their spiral shape, and all the stars should be spread out evenly around space.

But they're all still in tightly wound spiral galaxies, showing that the universe is young, not old. It's called the winding up dilemma, the secular worldview, which is all based on historical narratives, runs into a lot of dilemmas when real science and God's Word come into play. In Psalm 147, we're told that God tells the numbers of stars, comparing them to the grains of sand on the beaches of the world, and calls each one by their name.

God knows every single star and has a name for each and every one, just like he knows each and every one of us. And by the Word of God, the heavens were made by the breath of his mouth. God

spoke, and there it was. God spoke, and there was light. God spoke. There was a human being with molecular motors and genetic information all in place.

Wow. I want to show you one more fingerprint of God upon his creation. This is a whirlpool galaxy. NASA aim the powerful space telescope at the very center. And they came up with this image. They call it the X structure at the core of the Whirlpool Galaxy. I call it the fingerprint of God upon his creation. He will hold them in derision and the heavens declare the glory of God.

And in fact, that's exactly what real science is found to be true. And the firmament shows his handiwork, and is not God in the heights of the heavens. And behold, the heights of the stars. How high they are! That's microscopic man, astronomical God. I just want to take a quick look at some of God's fingerprints upon his creation.

I want to encourage you and urge you to realize that the heaven and the heaven of heavens cannot contain God. He created them. He is outside of his creation, and he is way beyond what he created. And as believers are to serve our Lord and Savior Jesus Christ. Who said you were a light of the world and a city set on a hill cannot be hidden.

Paul told us that we should walk as children of light. We can do a lot to serve. Simply, we can pray continually. I catch myself all the time not praying nearly as much as I ought to. There's so many things to pray for. You know, we have direct access to the creator of the universe, and we should be praying to him and asking him for for help and guidance.

We can share God's Word, and we can contend for the faith once given to the saints. The Word of God is under relentless attack, and most of the attacks are actually coming not from science or coming from historical narratives masquerading as science, our resources or designed and made to help. And I try to make them as inexpensive as I possibly can.

The two main resources that I have, and they're out here today. My new book, Consider the Cost. It is the most comprehensive single resource on the creation evolution issues and I try to make it to the point. And so I don't waste people's time and also as easy to understand as possible in that book. It covers the top ten folders, believes it covers the top ten Darwinian beliefs.

It covers the top ten evil fruit coming from these beliefs and that are carrying our nation apart. And the top ten reasons to believe in Biblical creation and the Global flood. It has over 300 references, over 300 Bible verses throughout, and I, spent nine months. I've written about ten books, but I just keep putting them into one.

I just keep making the one better and better. And I spent 900 hours, six months working on it last August through February. I wanted to really turn the focus into the historical narratives and, the whole time I'm working on it, I'm thinking, why are you doing this? No, you're going to make $0.04 an hour for you. You're actually working at $0.04 an hour.

And, but I just felt led to do it, and I worked on it and finally got it done in mid-February and sent it to the printer, got it back on Wednesday, March 4th at 530 in the afternoon. U.P.S. delivers it. And it's a nice book. I mean, it's a nice book. It's too bad no one's ever going to see it.

But the next morning at 8 a.m., my phone rings and it's the superintendent of Northwest Christian School. And he says, Russ, we're, it's a number one private school in Arizona. 11 of the last 12 years, by the way. Really good school. So we're going to we want to go through creation this summer. Would you know of a good book we could use?

And so. Well, he could use the book. I just got my hand and they ordered 500 of them. So God is good, but it's out there. And also, the other, I think is one of our best resources is our give a reason thumb drive. It has my five top teachings in the order I would present them to anybody.

And it starts out with the top ten Darwinian beliefs, top old earth beliefs endowed by our creator. Answering the top skeptical questions and ends with Noah's Ark and dinosaurs. That God's Word is true word for word and cover to cover. And please consider going with us to Grand Canyon, three weeks from now on Saturday, October 10th.

Because if the foundations be destroyed, what can the righteous do? We can rebuild those foundations. Let me end my part with a word of prayer. Your heavenly Father, I thank you for every dear souls here this morning, and I hope and I pray, the information that we share. It will be eye opening and encouraging, encouraging us to stand on your word, your non compromised word, your word who became flesh and dwelt among us.

Our Lord and Savior Jesus Christ. In his great name. I do pray. Amen. God bless you guys.
